Week 2

Name: Tan Jing Ying

Matrix No: 24081101/1

Question 1

In [8]:
```
name ="JingYing"
age = 25
mass = 56.7
```

In [9]:
```
print(name, "", type(name))
print(age, "", type(age))
print(mass, "", type(mass))
```

```
JingYing  <class 'str'>
25  <class 'int'>
56.7  <class 'float'>
```

Question 2

In [15]:
```
temperatures = [25, 30, 35, 40]

total_sum = sum(temperatures) #"sum" is python's designated key
size = len(temperatures)

print (total_sum/size)
```

```
32.5
```

In [16]:
```
temperatures. append(int (45))
```

In [17]:
```
print(type(temperatures))
```

```
<class 'list'>
```

In [18]:
```
print (size)
```

```
4
```

In [19]:
```
total_sum = sum(temperatures)
size = len(temperatures)
print (total_sum/size)
```

```
35.0
```

Question 3

In [20]:
```
def heat_energy (mass,temperature_rise):
    energy = 0 #Energy = mass × 4180 x temperature rise
    return energy
```

In [22]:
```
mass = float(input ("Enter the mass: "))
temperature_rise = float (input ("Enter the temperature rise: "))

print("Energy", heat_energy (mass, temperature_rise), "J")
```

```
Energy 0 J
```

In [ ]:
```

```
